

NOAA Announces Award to Synergy Solutions, Inc. for Plixer Hardware, Software Licenses, and Maintenance Support

Synergy Solutions Inc. (Synergy) is honored to announce a strategic Prime Contract award supporting the National Oceanic and Atmospheric Administration (NOAA) National Weather Service (NWS) National Centers of Environmental Prediction (NCEP) Central Operations (NCO) in the upgrade and purchase of an additional Plixer Scrutinizer® Enterprise Hardware Collector, and to Co-Term Software Licenses and Maintenance Renewal for the NOAA Center for Weather and Climate reduction (NCWCP) in College Park, MD, and the David Skaggs Research Center (DSRC) in Boulder, CO. According to NOAA, this award, and having this software will allow for faster response to issues and resolve outages and trend the need for future circuit increases.

Under this contract, Synergy is partnering with Plixer to provide engineering and support resources to assist NOAA with the upgrade and implementation of a distributed and fault tolerant Scrutinizer deployment. In addition, training will be provided to ensure NOAA personnel can leverage the solution to its fullest potential.

Thu-Anh Nelson, Synergy President and founder said, *“We are very excited to serve as a valued Contractor-partner to NOAA on this critical effort, which advances our commitment to important work and innovation and demonstrates Synergy’s ability to embrace technology challenges and deliver solutions and services to our Nation’s cyber warriors. This is also an amazing opportunity for Synergy to team and collaborate with the industry’s recognized leader in the network and security intelligence platform community.”*

“We are excited to be partnering with Synergy to better serve our customers,” said Bob Noel, Director of Strategic Partnerships and Marketing. *“Synergy bring years of experience in information technology, cybersecurity services (for both classified and unclassified environments), turnkey assessments, and training helping customers maximize their IT investments and lower risk.”*
